a

Final equation · four inputs matched by nominal visit

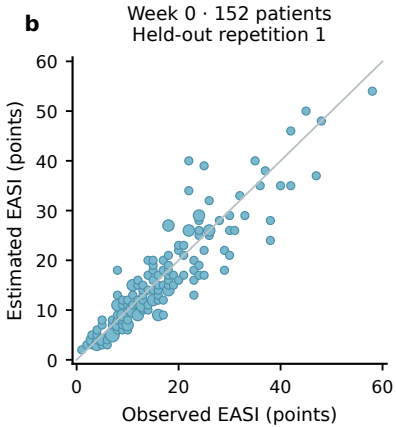

BSA (%) + CCL17 + CCL26 + IL-5 (each pg/mL in the study export)

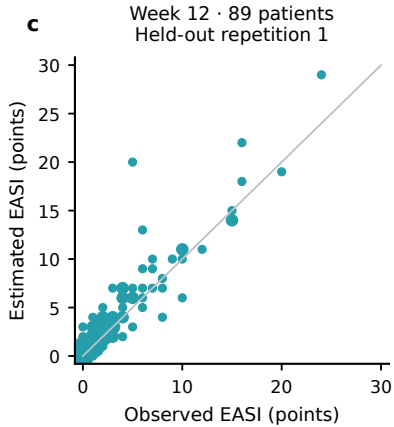

EASI ≈ clip{ BSA/100 × [51.27 + 0.98 $\log_2$(CCL17) + 0.96 $\log_2$(CCL26) − 0.83 $\log_2$(IL-5)], 0, 72 }

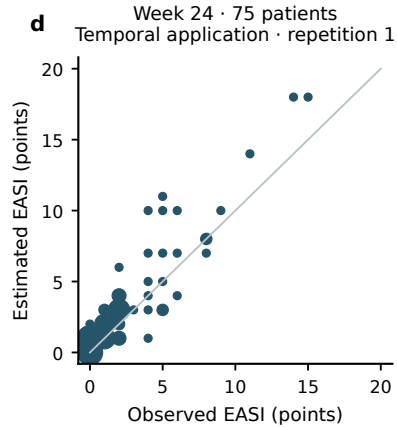

BSA 10% = 10. No treatment or prior score input. Full-precision coefficients are retained in the calculator.

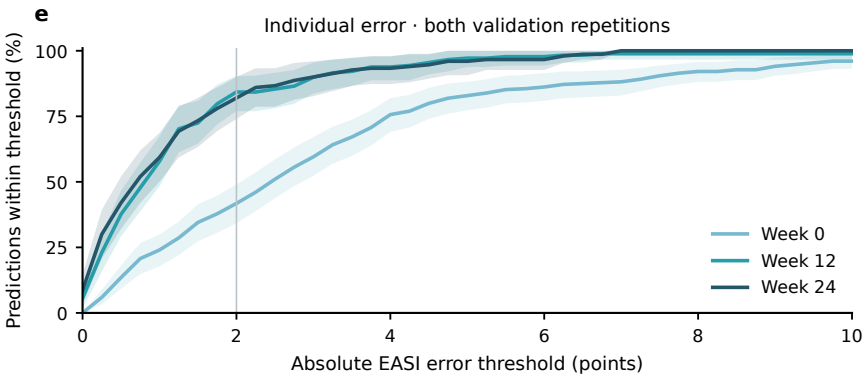

Scatter coordinates are rounded to one EASI point.

f

Primary results · both repetitions

MAE [95% CI], points

Week 0
3.19 [2.75, 3.70]
EASI >21: n = 44

Week 12
1.30 [0.96, 1.71]
EASI >21: n = 1

Week 24
1.19 [0.89, 1.53]
EASI >21: n = 0
